

FOCUS ON: the OVERLAP welding

Concept

**Welding process by overlapping both ends of the belt.
Suitable for any MAFDEL belt:**

- o ROUND belt
- o V belt, cogged or not, with or without a coating, ridge-top and above all reinforced

Both ends overlapped along 70mm

- Stronger joining
- Overlapping of both ends of the reinforcement
- Simple and fast
- No previous special cutting
- Higher traction resistance
- Increased load capacity
- Homogeneity of the welding point
- Safe process
- Welding on site without dismantling the conveyor

Tools

J150

Welding dies

OVERLAP Tool Case

Includes : M150, J150, 1 pair of dies, S135 cutting clamp.

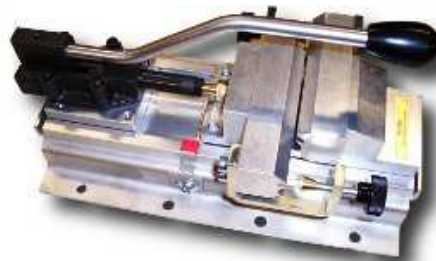

M150

With Teflon-covered S blade

But also...

J150M clamp with lever
For round belts

Recommended for DEL/ROC reinforced round belts \varnothing 9,5 - 10 and \varnothing 12 - 12,5mm
