Reinforced belts are joined in a standard belt press. A butt weld is not recommended.

It is possible to produce special belts with specific (non-standard) characteristics (thickness, hardness, cable distribution, two layers). For minimum quantities, please contact us.

DEL/SYNC®

The positive drive DEL/SYNC® is a reinforced solid belt combining conveyance and synchronous drive with extreme precision and hygiene.

It offers **excellent guidance** thanks to solid moulded teeth and **precise positioning** of the transported products.

The DEL/SYNC® is **reinforced with aramid reinforcements** that eliminate elongation. Both the upper and lower surfaces are easy to clean and ensure **optimal hygiene**. DEL/SYNC® also works with **small pulley diameters**.

Products in the DEL/SYNC® range offer a belt tailored **to different applications**. Consideration should be given to the need for adherence, pulley diameter, loads conveyed, length of conveyor...

A molded studded surface is available on request.

Synchronous shaped profiles can be fitted to the belt to ensure accurate indexing of the conveyed products.

To facilitate the assembly and adjustment of a DEL/SYNC® belt, it is essential to provide a **fixed tension system** with **take up equal to 1.5%** of the length of the conveyor. In the case of belts installed in parallel, **independent tension systems** must be provided.
